                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: This protein is essential to the cell-division process. It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity). SUBUNIT: Aggregates to form a ring-like structure (By similarity). SUBCELIULAR LOCATION: Cytoplasmic, Assembles at the inner surface of the cytoplasmic membrane (By similarity). SIMILARITY: BELONGS TO THE FTSZ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 KELAKYVDTLIVVPNQNLLALADKSTTMLEAFRYADDVLLEGVKGVTDLIVRPGLINL

Nucleic Acids Res. 28:4317-4331(2000).

-!- FUNCTION: This protein is essential to the cell-division process.

It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity).

-!- SUBCELLULAR LOCATION: Cytoplasmic. Assembles at the inner surface of the circular and the formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cell division; Septation; GTP-binding; Complete proteome NP_BIND 104 112 GTP (POTENTIAL).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FUNCTION: This protein is essential to the cell-division process. It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity).

SUBUNIT: Aggregates to form a ring-like structure (By similarity). SUBUNIT: Aggregates to form a ring-like structure (By similarity). SUBURITAR LOCATION: Cytoplasmic. Assembles at the inner surface of the cytoplasmic membrane (By similarity).

SIMILARITY: BELONGS TO THE FTSZ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    division

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: This protein is essential to the cell-division process. It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity).

SUBCLIDUAR LOCATION: Cytoplasmic. Assembles at the inner surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          or the cytoplasmic membrane (By similarity).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE=97369823; PubMed=9226264;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      mitted (APR-1998) to the EMBL/GenBank/DDBJ databases. FUNCTION: This protein is essential to the cell-division process. It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity). SUBUNIT: Aggregates to form a ring-like structure (By similarity). SUBCLIDITAR LOCATION: Cytoplasmic. Assembles at the inner surface of the cytoplasmic assembles at the inner surface.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of the cytoplasmic membrane (By similarity). SIMILARITY: BELONGS TO THE FTSZ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          153

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: This protein is essential to the cell-division process. It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity). SUBURIT: Aggregates to form a ring-like structure (By similarity). SUBCELLULAR LOCATION: Cytoplasmic, Assembles at the inner surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of the cytoplasmic membrane (By similarity). SIMILARITY: BELONGS TO THE FTSZ FAMILY.

It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity).

SUBUNIT: Aggregates to form a ring-like structure (By similarity). SUBCELULLAR LOCATION: Cytoplasmic. Assembles at the inner surface of the cytoplasmic membrane (By similarity).

SIMILARITY: BELONGS TO THE FTSZ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                        division;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            156 KENVDTLLIISNNRLLEVVDKKTPMLEAFREADNVLRQGVQGISDLITAPGYVNL 210

Nature 417:141-147(2002).

Nature 417:141-147(2002).

It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity).

SUBCHILIULAR LOCATION: Cytoplasmic, Assembles at the inner surface of the cytoplasmic membrane (By similarity).

SUBLIBITY: BELONGS TO THE FTSZ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bentley S.D., Chater K.F., Cerdeno-Tarraga A.-M., Challis G.L., Thomson N.R., James K.D., Harris D.E., Quali M.A., Kieser H.                                                                                                                                                                                                                                                                              It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By Similarity).

SUBUNIT: Aggregates to form a ring-like structure (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic. Assembles at the inner surface of the cytoplasmic membrane (By similarity).

SIMILARITY: BELONGS TO THE FTSZ FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        InterPro; IPR003008; Tu
Pfam; PF00091; tubulin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FUNCTION: This protein is essential to the cell-division process. It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity).

SUBCHIT: Aggregates to form a ring-like structure (By similarity).

SUBCHITLAR LOCATION: Cytoplasmic. Assembles at the inner surface

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Comparison between phylogenetic trees of some Trichogramma species and their Wolbachia endosymbionts.";

Russ. Entomol. J. 7:163-168(1998).

-I- FUNCTION: THIS PROTEIN IS ESSENTIAL TO THE CELL-DIVISION PROCESS.

ITS SEEMS TO ASSEMBLE INTO A DYNAMIC RING ON THE INNER SURFACE OF THE CYTOPLASMIC MEMBRANE AT THE PLACE WHERE DIVISION WILL OCCUR, AND THE FORMATION OF THE RING IS THE SIGNAL FOR SEPTATION TO BEGIN. BINDS TO AND HYDROLYZES GTP (BY SIMILARITY).

-I- SUBCULLULAR LOCATION: CYTOPLASMIC. ASSEMBLE AT THE INNER SURFACE OF THE CYTOPLASMIC MEMBRANE (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              008390;

ERLOWOL. J. 7:163-168(1998).

-!- FUNCTION: THIS PROTEIN IS ESSENTIAL TO THE CELL-DIVISION PROCESS.
-ITS SEEMS TO ASSEMBLE INTO A DYNAMIC RING ON THE INNER SURFACE OF THE CYTOPLASMIC MEMBRANE AT THE PLACE WHERE DIVISION WILL OCCUR, AND THE FORMATION OF THE RING IS THE SIGNAL FOR SEPTATION TO BEGIN. BINDS TO AND HYDROLYZES GTP (BY SIMILARITY).
-!- SUBGULIT: AGGREGATE TO FORM A RING-LIKE STRUCTURE (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: CYTOPLASMIC. ASSEMBLE AT THE INNER SURFACE OF THE CYTOPLASMIC MEMBRANE (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FTSZ
